linkedin.com/in/deepanzhu-chaudhary

Software engineer in Tokyo building LLM systems and backend services that run in production: asynchronous pipelines, structured LLM output with validation, and search over large datasets. Works across teams in English and Japanese.

EXPERIENCE

Software Development Engineer · Major HR-tech company, Tokyo, Japan — Oct 2024 – Present

AI-powered job content review platform Ruby on Rails, Solid Queue, MySQL, AWS, LLM APIs

- Owned end-to-end design and delivery of an LLM-based platform that automates pre-publication quality checks for job postings, replacing a fully manual review workflow.
- Architected an asynchronous batch pipeline on Solid Queue that ingests new postings, runs LLM-based validation and persists structured review results to MySQL.
- Engineered prompts for structured, actionable findings and built automated quality gates (output validation, error handling) that guard against hallucinations and API failures.
- Built the full-stack Rails application and reviewer UI, led the AWS deployment, set up New Relic logs, alerts and dashboards, and established RSpec unit and integration tests.

AI candidate matching and outreach system Ruby on Rails, Next.js, Google BigQuery, AWS, LLM APIs

- Created an LLM-driven ranking service that scores and prioritises candidates against each job's requirements, replacing manual criteria-based search for recruiters.
- Implemented LLM-generated outreach messages tailored to each job description, with a human-in-the-loop review step before scheduled delivery.
- Designed a versioned Rails JSON API over BigQuery for search across a nested, multi-category filter schema, with dynamic SQL generation and two-phase retrieval (ID lookup, then profile enrichment) to reduce query cost.
- Parallelised BigQuery profile queries with timeout-bounded execution and automatic job cancellation on failure, improving load latency and resilience. Delivered the full stack: Next.js frontend, Rails API and AWS deployment.

Job search platform Ruby on Rails, Python, Go, OpenSearch, AWS

- Developed and scaled backend services for a large job-search platform with complex search and ranking logic.
- Built batch pipelines applying clustering and de-duplication to improve search relevance, data consistency and SEO, and engineered Python/Go pipelines on OpenSearch for indexing, querying and validation.
- Automated CI/CD and AWS deployments; collaborated with AI and IT teams in Japanese and English.

Software Development Intern · Contact-center services company, Tokyo, Japan — Jun 2023 – Jul 2023

- Co-developed a virtual contact center in a metaverse environment using Unity, with a cross-functional team.
- Deployed the backend on Amazon GameLift and integrated the Unity client with AWS services including Cognito, Lambda, CodeCommit and Amazon Connect.

EDUCATION

Indian Institute of Technology Patna · Patna, India — Jul 2020 – May 2024

B.Tech in Mechanical Engineering · CPI 8.36/10

SKILLS

Languages	Python, Go, Ruby, Java, C/C++, JavaScript, SQL
Frameworks & testing	Ruby on Rails, Solid Queue, Next.js, Gin, RSpec
Cloud & data	AWS (EC2, S3, RDS, OpenSearch), GCP (BigQuery), MySQL, PostgreSQL, Docker, New Relic
AI / LLM	LLM integration, prompt engineering, output validation and hallucination handling
Spoken	English (fluent), Japanese (JLPT N3), cross-team coordination in both

LEADERSHIP & ACHIEVEMENTS

- Scrum Master for my engineering team: sprint planning, stand-ups and retrospectives — Jan 2025 – Present
- Assistant-Head Coordinator, Training & Placement Cell, IIT Patna — Jan 2023 – Apr 2024
- Competitive programming: Facebook Hacker Cup 2022 Round 3 qualifier; 1,000+ problems solved on Codeforces and LeetCode
